

## Irgazin® DPP Rubine TR

transparent DPP red with outstanding color strength, excellent durability and very high saturation; recommended for automotive and high-grade industrial paints

chemical type diketo-pyrrolo-pyrrole **Colour Index** Pigment Red 264 | 561300 full shade 1/3 standard depth of shade 1/25 standard depth of shade alkyd/melamine system alkyd/melamine system alkyd/melamine system resistance to weathering fastness to light acrylic/melamine system alkyd/melamine system 1/25 standard depth of shade 1/25 standard depth of shade 8 3-4 1/3 standard depth of shade 1/3 standard depth of shade 8 full shade 5 50:50 aluminum 8 alkyd/melamine system 80:20 aluminum 8 1/25 standard depth of shade 4 full shade 8 1/3 standard depth of shade 4-5 full shade 5 two-coat metallic system 50:50 aluminum 5 50:50 aluminum <del>-</del>5 80:20 aluminum 5 80:20 aluminum <del>-</del>5 suitability for industries general industrial coil decorative automotive powder wood 0 suitability for applications baking finishes water-based acrylic/isocyanate acid-curable amine-curable air-drying explanation of symbols suitable potentially suitable O not suitable physical data рН 9.2 density [g/cm<sup>3</sup>] 1.39

butyl acetate water 5
ethanol 4–5 white spirit
methylethyl ketone 4–5 xylene 5
methoxy-1,2-propanol

Please contact your BASF sales representative for more information on the test methods applied.

The proximity of the demonstrated shades to the original hues depends on the settings and calibration of the equipment used (monitor, printer).

## Safety

When handling this product, please comply with the advice and information given in the safety data sheet and observe protective and workplace hygiene measures adequate for handling chemicals.

It cannot be ruled out that this product contains particles  $< 0.1 \mu m$ .

If document contains an electron microscopy photograph: Pigment particles form the particle size distribution shown in the electron microscopy photograph above only after intensive dispersion by high shear stresses. In the supplied bulk material, the high adhesive forces between the tiny primary pigment particles cause them to form much larger agglomerates and aggregates which determine the flow and dust properties.

## Note

The data contained in this publication are based on our current knowledge and experience. In view of the many factors that may affect processing and application of our product, these data do not relieve processors from carrying out their own investigations and tests; neither do these data imply any guarantee of certain properties, nor the suitability of the product for a specific purpose. Any descriptions, drawings, photographs, data, proportions, weights, etc. given herein may change without prior information and do not constitute the agreed contractual quality of the product. The agreed contractual quality of the product results exclusively from the statements made in the product specification. It is the responsibility of the recipient of our product to ensure that any proprietary rights and existing laws and legislation are observed.
